EXPERIENCE

The Relish, San Francisco — Intern

April 2019 - May 2019

- Built a graphical interface using React and Firebase that allows managers to add, edit, and reorganize data in internal software
- Refactored application to use Redux store and component wrappers to increase application load speed by over 70% per click
- Increased test coverage of application to cover data gathered from Firebase and stored using Redux

Palomino, Little Gem, Roka Akor, San Francisco — Server

July 2017 - January 2019

- Provided friendly service by collaborating in teams in high-pressure situations

Collège la Chaussonnière, France — Teaching Assistant

October 2016 - May 2017

- Collaborated with teachers to create and teach bilingual French-English curriculum for middle school language classes

PROJECTS

Microblog — React, Redux, Node

Single-page application that allows users to create, edit, and delete posts, leave comments, and upvote user content

Jobly — Express/Node.js, React

Job search application in which applicants can apply for jobs that companies have posted. Views are accessible based on authorization privileges

Warbler — Flask, PostgreSQL, SQLAlchemy

Twitter clone that authenticates users and allows for posting, deleting, and editing “warbles”. Users can follow one another
